Human, foetal liver; gene expression; single exon nucleic acid probe; ss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a single exon nucleic acid probe for nesuring human gene expression in a sample derived from human foatal measuring and angle exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples delived from human feetal liver. The present sequence is a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           162 ACTITATCCAATITICACACAGACGCIGGAAGACGICTICCGAAGGATITITATTACTIAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 ATGGACAATTGGCGCCAGAACACAGCTGAGCAAGAGGCCCTCCAAGCCAAGTTGAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  222 ATGGACAATTGGCGCCAGAACACAGCTGAGCAAGAGGCCCTCCAAGCCAAGTTGAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       probe of the invention.

The sequence date for this patent did not form part of the printed appealitation, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 ACTITATCCAATITCACACACACGCTGGAAGACGTCTTCCGAAGGATTTTTATTACTTAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in smples derived from the human heart via informariays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system congenital heart disease. hypertension, cardiac arrhythmias and congenital heart disease. Note: The patent disease great for this patent did not form part of the printed affection, but was obtained in electronic format directly from MIPO at fip.wipo.int/pub/published_pct_gequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   221

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human single exon nucleic acid probes (SIMP). The present sequence is one such probe. The SIMPs are derived from human Helscells The SIMPs can be used to produce a single exon microrary. Which can be used for measuring human gene expression in a sample derived from human cervical epithelial calls. By measuring gene expression, the probes are therefore useful in grading and/or sraging of disasses of the cervix, notaby cervical concer. We sequence data for this paerin did not form part of the printed specification, but was obtained in electronic form at the class specification, but was obtained in electronic form at the time was pecification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ACTITATCCAATTTCACACACACACGCTGGAAGACGTCTTCCGGAAGGATTTTTATTACTTAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of single exon nucleic acid probes which are detrived from genomic supernessed in the human bone marrow. They can be used to measurn gene expression in bone marrow samples, which may enable the improved disgnosis and treatment of cancers such as Imphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.

The present invention tealest to movel single exon mutches card probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridies ar high stringency to a radicial expressed in the human breast on a right stringency to a radicial expressed in the human breast on contoins and prognosing diseases of the human breast, particularly those diseases with polygenic actiology in the diseases include breast cancer, disorders of development, inflammatory diseases of the preset, thorograph of the preset diseases of the breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       162 ACTITATCCAATITCACAGAGGCGTGGAAGACGTCTTCCGAAGGATTTTTATTACTTAT 221

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producting an arrowarsy for predicting, measuring and displaying gene expression in samples derived from human platenia. The probes are useful for artenated id signosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATGGACAATTGGCGCCAGAACACAGCTGAGCAAGAGGCCCTCCAAGCCAAAGTTGAT

Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples -

Claim 1; SEQ ID No 3487; 634pp; English.

probes. Also included are a microarray comprising the novel set of notes the novel set of probes within Mynthales at high stringsency to a nucleic card expressed in the human lung, measuring gene expression in a collection of detectably labeled muclinic acids derived from human lung, comprising of a collection of detectably labeled muclinic acids derived from human lung of man, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising of the array; identifying exons in a eukaryotic genome, comprising confine eukaryote, and (b) detecting specific hybridisation of detectably clabeled muclic acids from elearyote lung makes, to a single sen probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assiming exons to a single gene comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 The invention relates to a spatially-addressable set of single exon 

tissues and (0) measuring the expression or each or the exons in several interactions having a probe with the exon, where a common pattern of expression of the swam in the exon common pattern of expression of the swam in the tissues und/or cell types uning hybridiation to a single exon expression of the swam in the tissues und/or cell types undicates that the the exons should be assigned to a single gene a peptidic comprising one of 12011 sequences, mentioned in the spucification, or encoded by the copy probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly capital human lung derived mank, and for the study of lung disease counts as asthma. Aung cancer, chronic obttructive pulmonary disease. Cropp), interacticial lung disease (IID), familial idopathic pulmonary fibroris, neurofibronatosis, tuberous selerosis, guacher's disease, themmanky-budlak hyphrome astrocides; pulmonary plantant control of the contr probe of the invention.

Human genome-derived single exon nucleic acid probes useful f analyzing gene expression in human cervical epithelial cells Claim 25; SEQ ID No 5189; 487pp; English.

(SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used from mana gene expression in a sample derived from human cervical epithelial cells. By measuring gene The present invention relates to human single exon nucleic acid probes

breast. The probes are useful for predicting, diagnosing, grading, stepling, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aeriology. The diseases include breast cancer, disorders of development, inflammatory diseases of the breast, thoroystic changes, proliferative breast disease and mon-carcinoma tumours.

```
Tevels of many expression and to isolar homologous sequences for recombinant expression of 1872; in gene therapy to increase potassium for damnel activity and to generate transgenic animals, as models and for drug screening. Recombinant 1872 is used for studying biochemical activity of 1872 and its role in disordute of gastric motility and gastric acid secretion, and to raise specific antibodies. Is a modulators are potentially useful for treating diseases associated with increased or reduced potassium channel activity e.g. as an experienced and anti-arrhythmic seques for treating myocardial infarction and as regulators of gastric acid secretion.
The present sequence encodes a human potassium channal subunit, designated 18K2. The 18K2 polyuucleotide, and detived probes, are used diagnostically to detect mutations in the 18K2 gene, to determine

Sequences ABB10981-ABB12310 represent 1350 novel human polypeptides, and equences ABB10981-ABB12310 represent nucleic acide encoding them. The invention also relates to vectors and recombinant host cells comprising a convection also relates to vectors and recombinant host cells comprising a control also relates to vectors and recombinant host cells comprising a control also related to the invention, methods of packeting the nucleotides control and page them to the properties of the invention. Although novel, many of the bind to polypeptides of the invention and though novel, many of the control interapeutic applications. The polypeptides of the invention may giving an insight into their probable biological activities, and hence to polypeptides of the invention are lighterentiation activities, including cytokine, cell proliferation or cell differentiation activities, including cytokine, cell proliferation or cell differentiation activities, receptor or lighted activities, or may be commonodulatory activity; tissue growth activity; chemotactor or chemokinetic activities, haemotetic, thrombotic or control and their biological activities, propeptides and mucleotides of the invention are useful for preventing, treating or metastasis.

Conditions, e.g., by proper or lighted activities, or may be conditions in their biological activities, webload or lymphoid cell conditions in chronic inflammatory conditions from the activities or proliferative retringeatby, athereorders (e.g., actherm or arthritis), critical cauld and disorders (e.g., actherm or arthritis), critical properties are not all proliferation and disorders (e.g., actherm or arthritis), critical and disorders (e.g., actherm or arthritis), critical and disorders (e.g., actherming the many be used to promote wound to respect the many part of activities and purposed activity may be used in collutions to wind the hose with the many properties and proliferation to immune disorders to proliferation and activity may be used in activity may be used in a disorders to 120 that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions and in drug accending techniques. The present sequence represents a cobw encoding a screening techniques. The present sequence represents a cobw encoding a 44 ACTITATICCAATITICACACAGACGCTGGAAGACGTCTTCCGAAGGATTTTTATTACTTAT 103 163 9 61 ATGGACAATTGGCGCCAGAACACACAGCTGAGCAAGAGCCCCTCCAAGCCCAAAGTTGAT 104 ATGGACAATTGGCGCCAGAACACACTGAGCGCAAGAGGCCCTCCAAGCCAAAGTTGAT 1 ACTITATCCAATITCACACAGACGCTGGAAGACGTCTTCCGAAGGATTTTTATTACTIAT Gaps Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. architits and cancer -..                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucloscides (AAK51455-AAK3145) and the encoded polyneptides (AAK71450-) that extibit activity elating to cytokine should in other catholication or which may induce production of other cytokines in other cath populations. The production of other cytokines in other cath populations. The polynucloscides are useful in gene therapy, vaccines or populate therapy to pypopulate have various cytokine-like activities, e.g. stem cell growth factor activity, hammingologies acquibiting activity, rissue growth factor activity, hammingologies crivity and activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 ATGGACAATTGGCGCCAGAACACAACAGCTGAGCAAGAGGCCCTCCAAGCCAAAGTTGAT 120

The present invention relates to novel KCNE2 genes encoding Min-K related (MIRP) I non channel proteins and polymorphisms in these genes that are associated with lon channel disorders including antibiocric-induced long off syndrome (LQTS). Detecting a muterion at amino acid positions 8, 54, 57 or 116 of MiRPL polymeptide or a muterion at a muclecide position encoding the amino acid positions is useful for disquosing the presence of a polymorphism that causes druy-induced LQTS. The disagnostic methods are useful in the development of new drug therapies which selectively target on or more KCNE2 polymorphisms that care associated with cardiac arrhythmise. The present sequence is human KCNE2 mutent bNA (420F).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 GCIGAGAACTICTACTATGCCATCCTGGTGCTGATGGTGATGGAATGTTCTCTTC 180

Human KCNE2 wild type DNA

Homo sapiens

```
The invention relates to novel ion channel proteins related to the invention relates to novel ion channel proteins of the five the five five file acids acids according them. The proteins of the invention are human and rack (KME2 (MRR1; AAB29585 and AAB29586, respectively); and human and mouse KCME2 (MRR1; AAB29585 and AAB29588, respectively); and human and mouse KCME2 (MRR2; AAB2958 and AAB29590, respectively); and number successing these proteins are given in AAB29590, AAB20590; respectively); and man and mouse KCME4 (MRR2; AAB29589 and AAB29590, respectively); and part human and mouse KCME2, while are associated with long OT syndrome. The invention also relates to methode of disquesting of the combinan antimals comprising a heterologue is not channel protein agene of the invention in an endogenous KCME2, KCME3 or KCME4 gene, transgenic of intended of an arthodes of and screening drugs for treating long OT syndrome using KCME2 proteins in the methods and antipolice against KCME2 proteins. The embtods, antibodies nuclaic acids and proteins may be used for disquesting or treating ton channel of subcoders, especially long OT syndrome treating ton channel of subcoders, especially long OT syndrome (Treating or syndrome acids, and proteins may be used for disquesting or syndrome acting KCME2 protein and the sepecially long OT syndrome and the sepecially pencing the present acquence represents DNA encoding a mutant human KCME2 (MRR2) specifically claimed for use in dispussion and drug screening channels and the inventions.
                                                                     Human; KCNE2; MiRP1; potassium channel protein; KOKE1-related;
MinK-related; long CT syndrone; cardiac arrhykhmia;
drug screening; Knockout mouse; transgenic animal; ton channel disorder;
fast delayed rectifier potassium channel; anti-KNCE2 antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        156 AGAACACAACAGCTGAGCAAGAGGCCCTCCAAGCCAAAGTTGATGCTGAGAACTTCTACT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel KCNE2 genes encoding Min-X related (MIRP) I non channel proceshs and polymorphisms in these genes that are associated with lan channel speciels and polymorphisms in these genes that are associated with lan channel disorders including antibiocic-induced long off syndrome (LQTS). Detecting a mutation at amino acid positions 9, 54, 57 or 116 of MIRP polypeptide or a mutation at a nucleotide position encoding the amino acid positions is useful for diagnosing the presence of a polymorphism that causes drug-induced LQTS. The diagnositic methods are useful in the development of new drug therapies which selectively range on or more KCNEZ polymorphisms there are associated with cardiac riphythmise. The present sequence is human KCNEZ wild type DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       80 ACTITIATCCAATTICACACACACACGCTGGAAGACGTCTTCCGAAGGATTTTTATTACTTAT 139

The invention relates to novel ion channel proceins related to the invention relates to novel ion channel proceins related to the CRCE (MINIX) and to nucleic acids encoding them. The proteins of proteins of the invention are human and mouse KCME2 (MIRE); AAB29585 and AAB29586, respectively); human and mouse KCME3 (MIRE); AAB29585 and AAB29586, respectively); the cDNAs encoding these proteins are given in AAB29580, to respectively); the cDNAs encoding these proteins are given in AAB29590, to respectively); the cDNAs encoding these proteins are given in AAB29590, to respectively); the cDNAs encoding these proteins are given in AAB29590, to respectively); the cDNAs encoding these proteins are given in AAB29590, and AAB29590, to relate a to methods of disgnosting of the strength of the sing the KCME2, KCME3 or KCME3 or KCME3 gene, transgenic of disruption in an endogenous KCME2, KCME3 or KCME3 or KCME3 gene, transgenic of the invention, a transgenic animal comprising a transgenic animal comprising a transgenic animal comprising and the top of the invention, and antibodies against KCME2 proteins. The embtods a nucleic acids, and proteins may be used for disgnosting or treating ion channel of kCME2 and HERC are appecially long or syndrome transgenic animal comprising KCME2 proteins. The embtods a nucleic acids and surbodies against KCME2 proteins. The embtods and surbodies (for the present emptods and the surbodies and the surposition and the surpo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel KCNE2 genes encoding Min.K related (MIRP) I in channel proteshs and polymorphisms in these genes that are associated with lon channel disorders including antibiotic-induced long Off syndrome (LQTS). Detecting a mutation at amino acid positions 8, 54, 57 or 116 of MiRPI polypeptide or a mutation at a muclecide position encoding the amino acid positions is useful for dispencial position of a polymorphism that causes drug-induced LQTS. The diagnosist he presence of a polymorphisms that causes drug-induced LQTS. The diagnostic method are useful in the development of new drug therepies which selectively target one or more KONEZ polymorphisms that caused with cardiac arrhythmias. The present equence is human KCNEZ mutant DNN (ASSG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        77 AGAACACAACAGCTGAGCAAGAGGCCCTCCAAGCCAAAGTTGATGCTGAGAACTTCTACT 136

Detecting a mutation at a almost possibilities 5. 57, or 116 of MKRP1 polypepties or a mutution at a nucleotide position encoding the amino acid positions is useful for deappoint to the presence of a polymorphism that causes drug-induced LQTS. The diagnostic methods

The invention relates to novel ion channel proteins related to CKENCEI (MANK) and to nucleic acids encoding them. The proteins of the invention are human and tax (KMEZ (MANK) AAR2958 and AAR2958.

Crespectively); human and mouse KCMEZ (MARZ), AAR2958 and AAR29588, respectively); human and mouse KCMEZ (MARZ), AAR2958 and AAR29588, respectively); and human and mouse KCMEZ (MARZ), AAR2958 and AAR29589.

Crespectively); The cDNAs encoding these proteins are given in AAR2601.

AAC64076, KCMEZ, AD09 with HERG, forms cardiac fast delayed rectifier to pressule members (I-KR), mutations in which are associated with long OT Syndrome using the KCMEZ, AD09 with MARZ (KMEZ) are kCMEZ quee, it anogenic and disquesting the KCMEZ, MARZ or KCMEZ quee, transgenic of distruption in an endogenous KCMEZ, KCMEZ or KCMEZ or KCMEZ or KCMEZ or KCMEZ and HERC COMPANIAN and methods of a reasonable contraining of the invention, a transgenic animal comprising human KQMEZ and HERC CMEX, and acreeming for treating Jong CK syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   80 ACTITATCCAATITCACACACACACGCGGAAGACGTCTTCCGAAGGATTTTTATTACTTAT 139

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; KCNE2; MiRPI; potassium channel protein; KNCE1-related;
MinK-related; long Off syndrone, cardiac arrhythmia;
drug screening; Knockout mouse; transgenic animal; ion channel disorder;
fast delayed rectifier potassium channel; anti-KNCE2 antibody;
syndrome using the KNNE2, KCNE3 or KCNE4 genes, a knockout mouse with a disruption in an endogenous KCNE2, KCNE3 or KCNE4 gene, transgenic nonhuman animals comprising a heterologous ion channel procein gene of the invention, a transgenic animal comprising human facts and HERG DNA, and methods of and screening drugs for treating long OT syndrome using KCNE2 proceins (including mutants) nucleic acids encoding them and antibodies against KNCE2 proceins. The methods, antibodies, uncleic acids encoding them dialogues and proceins may be used for diagnosing or treating ion channel disorders, especially long CT syndrome. Transgenic animals comprising KCNE2 and HERG are useful for testing anti-long OT syndrome drugs.
                                                                                                                                                                                                                                                                                 The present sequence represents DNA encoding a mutant human KCNZ2 (MIRMI) specifically claimed for use in diagnostic and drug screening methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20 AGACGCTGGAAGACGTCTTCCGAAGGATTTTTATTACTTATAGGACAATTGGCGCCAGA

nucleit acid probes for measuring gene expression in a sample derived from human breast and #17 cells. The method involves contecting the probes with a collection of detectably labelled nucleic acids the probes with a collection of detectably labelled nucleic acids the probes with a collection of detectably labelled nucleic acids bound to each probe of the microarray. The probes are useful for bound to each probe of the microarray of probes are useful for concede proteins. They are useful for gene discovery, and for encode proteins. They are useful for seesaing the toxicity of chemical expression analysis is useful for assessing the toxicity of chemical capture for production of the involvention predisposition and/or prognosing the toxicity of chemical captures for measuring gene expression, with far less bias training the action and the production of functional information from genomic sequence. The respective of the involvention research sequence is a single exon nucleic acid probe of the invention. Proceeding the sequence of the invention or procession, which is a contraction of the invention.

**Contraction of the properties of the invention or procession in the contraction of the invention. The procession is a single with the procession and the procession with the procession and the procession with the procession and the procession ana

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel KCNE2 genes encoding Min-K related (MIRP) I non channel proteins and polymorphisms in these genes that are associated with ion channel proteins and polymorphisms. In these genes that are associated with ion channel disorders including antibiotic-induced long off syndrome (LOTS). Detecting a mutation at amino acid positions 8, 54, 57 or 116 of MiRPI polypeptide or a mutation at a nucleotide position encoding the amino acid positions is useful for disagnosing the presence of a polymorphism that causes drug-induced LOTS. The diagnostic methods are useful in the development of new drug therapies which selectively arage one or more KCNE2 polymorphisms that are associated with cardiac arrhychmisms. The present sequence is human KCNE2 mutant DNA (77340).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ő

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to single exon nuclaic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in sample a derived from the human heart via macroarrays. By measuring gene expression, the probes are useful for predicting, displaying, grading, stading, and incorrays expression, the monitoring and prognosting dispasses of the human heart and vaccing energy expension, or an expectation of the stading and prognosting dispasses of the human heart and vaccing expression, or an expectation of the stading and prognosting dispasses of the human feart and vaccing expectation congenital heart disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        measuring human gene expression in a sample derived from human foetal liver. The single exon mucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human petal liver. The present sequence is a single exon nucleic acid human pool of the invention.

Note: The sequence data for this parent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at [fp.wipo.int/pub/published_pct_sequences.

The present invention provides a number of single exon nuclaic acid probes which are derived from genomic sequences expressed in the human born marrow. They can be used to messure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as Tympkoms, leukaemia and mysloma. The present sequence is one of the probes of the invention.

The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Probe, human; breast disease; breast cancer; development disorder; ss; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                        The present invention relates to single exon muclaic acid probes (SENP). The present sequence is one such probe. The probes are useful for exoducting a microarray for predicting, measuring and displaying gene expression in samples derived from himm placents. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel single exon nucleic acid probe used to measuring gene expression in a human breast -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AGCCAAAGTTGATGCTGAGAACTTCTACTATGTCATCCTGTACCTCATGGTGATGATTGG 167
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 AGCCAAAGTTGATGCTGAGAACTTCTACTATGTCATCCTGTACCTCATGGTGATGGTTGG 120
                                                                                                                        The present invention relates to human single exon nucleic acid probes (CRBN). The present equance is one south probe. The SBNs are at derived from human hear than cells. The SBNs can be used for measuring human gene expression in a sample element from human error for measuring human gene expression in a sample element from human cervical epithelial cells. The measuring sene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical canner.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic forms directly from MIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Probe #16761 used to measure gene expression in human placenta sample.

Human genome-derived single exon nucleic acid probes useful for

```
The invention relates to a spatially-addressable set of single exon tructed and probes for mesauring spen expression in a sample derived from the an inprobes for mesauring spen expression in a sample derived from the interpretation of the specification, or their complements of the 12397 open reading frames derived from the 1564 probes. Also included are a microstry comprising the movel set of probes which they from the 1564 probes included are a microstry comprising the novel set of probes which they from the sample derived from the sample derived from the sample derived from the annual trug, meaning spen expression in a sample derived from them human lung mann, and the meaning the sample detectably bound to each probe of the sample derived from them they facility and excens in a twistypic spenome, comprising the array facility and excens in a twistypic spenome, comprising the array facility predicting at least one excluded the probe in a single spen in the above medicined for excensive said (10) detectined spenicles of the probe is a findided above medicined for excensive said (10) detectined sexue probe.

In the above medicined facilities to the predicted excent probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method tise above and (b) measuring the expression of each of the exons in several tiseuses and/or cell types using hybridiation where a common pattern of expression of the exons in the issues and/or cell types indicates that the expression of the exons in the issues and/or cell types indicates that the expression of the exons in the issues and/or cell types indicates that the expression should be assigned to a single gener a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the expression analysis, and for identifying exons in a gene, particularly cusing human lung derived mRN and for the study of lung disease cush man a machina, lung disease (LD), finilial idopathic pulmonary disease.

(CODP), interestital lung disease (LD), finilial idopathic pulmonary disease, memory interestital the expression expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       108 AGCCAAAGTTGATGCTGAGAACTTCTACTATGTCATCCTGTACCTCATGGTGATGATTGG 167

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09
                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO aft top.wipo.int/pub/published_pot_sequences.
breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygonic actiology. The diseases include breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinom tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; ds; single exon probe; asthma; lung cancer; COPD; ILD; Enroit cobstructive pulmonary disease; intertitial lung disease; Enroit cobstructive pulmonary disease; intertitial lung disease; tuberous sclerosis; deucher disease; Nismann-Pick disease; tuberous sclerosis; deucher disease; Nismann-Pick disease; pulmonary lasticoycless; lunghangiolehengeners prodeced pulmonary hasticoycless; lunghangiolehengeners is Karagener ayndrome; pulmonary wediar protections is forced to pulmonary and the pulmonary pulmonary pulmonary pulmonary pulmonary pulmonary pulmonary hypertends pulmonary disease; open reading frame; ORP:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes oligonucleotide libraries for detecting managesenger RMAs that populate a (sub-) transcribone, where the messenger RMAs that populate a genome The library comprises messenger RMAs transcribed from multiple to transcribid con units that populate a genome The library comprises are of several oligonucleotides, each capable of hybridising selectively to a set of messenger RMAs transcribed from a given transcription unit of the oligonucleotide inhering from a given transcription unit of the persone, which encodes one or more messenger RMA splice variants. Of the oligonucleotide libraries are useful for a given transcription unit of the oligonucleotide libraries on a seful of detecting mRMAs transcriptes and splice variants of human or animal content transcriptions. The libraries may also be used as specialised minimal transcriptions of detection of tissue wide a sub-transcription unit of tissue of detect transcriptions of detection of tissue, and special specific pathological series only expressed in specific tissue under a specific pathological condition; to detect developmental specific pathological condition; to detect developmental specific genes and no detect RMA cranscriptions and splice variants of a transcriptions of a pathological condition; to detect developmental specific appress and police variants of a transcription of a pathological condition; to detect the present invention in the exemplification of the present invention format disorder and condition, but was obtained in electronic format disorder invention in the present invention format directly from MIPO and the present invention of the printed condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New oligomuclectide libraries comprising oligomuclectides which selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for deceting tissue, pathology, and

The invention relates to novel ion channel proceins related to the invention relates to novel ion channel proceins related to the invention are human and rat KORE2 (MiRFI, AAB29565 and AAB29566.

The invention are human and mouse KCRE3 (MiRFI, AAB29565 and AAB29566, respectively); human and mouse KCRE3 (MiRFI, AAB29568 and AAB29569, respectively); and human and mouse KCRE4 (MiRFI); AAB29569 and AAB29569, respectively); and human and mouse KCRE4 (MiRFI); AAB29599 and AAB29590, respectively); the cDNAs encoding these proceins are associated with long processium channels (I-KR), mutations in which are associated with long of syndrome. The invention also relates to methods of disquesing of syndrome using the KCNE2, KCNE3 or KCNE4 gene, transpersic continuant animals comprising a herecologous ion channel procein group of the invention, a transpent animal comprising them an endogenous KCNE2, KCNE3 or KCNE4 gene, transpersic control and methods of and screening drugs for treating ion channel control and antibodise against KNE2 and antibodises, nucleic caides encoding them and antibodise against KNE2 proceins. The methods, antibodise, nucleic caides, and proceins may be used for disquesing or treating ion channel control and antibodise against KNE2 and size dispussion or transpention and successing separating or transpention and successing separating and the specially long OT syndrome. Transpentic animals comprising CK reactes sequence represents a PCR primer used to amplify KNCE2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          KCNE2, MiRP1, KCNE3, MiRP2, KCNE4, MiRP3, ion channel procedin;

The IRSK potymucleoride, and derived probes, are used diagnostically to detect mutations in the IRKZ game, to determine levels of mRNA expression and to isolate homologous sequences; for recombinant expression of IRKZ; in gene thorapy to intercase pocassium channel activity and to generate
Novel gene encoding Min-K related ion channel protein subunit and polymorphisms in this gene associated with antibiotic-induced long QT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; potassium channel; IsK2; gene therapy; gastric motility;
gastric acid secretion; anti-arrhythmic agent; myocardial infarction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New DNA encoding the IsK2 potassium channel subunit, useful e.g. for detecting mutations and screening for therapeutic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primer used to amplify potassium channel subunit IsK2 cDNA fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

    No. is the number of results predicted by chance to have a
regreater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
